---

number of pages to make. You can make as many pages as you want. Page Tables feature: Use page table to create as many pages as you wish (repeatable). 100 Free pages for you to use in any project you create. Working with tables Note This edition is NOT updated for Windows 10. HTML Maker Features: Create web pages with full HTML Designer and Preview Workspaces Unlimited number of pages to create. Gain a

---

basic understanding of HTML editor in just a few minutes. Start using the more advanced features in HTML Maker later on, in your spare time. Workspace and Font Setup

### The HTML Maker workspace is similar to the one of a common word processing program. You can draw a horizontal line, change the text color, background, font, and positioning. Unlike a word processor, HTML Maker supports the bold, italic,

---

underline text styling. Moreover, it does not require any special registration or equipment to be able to use it. To draw a horizontal line across the page, just hold down the Shift key while pressing your mouse to the position where you want to place the line. Additionally, HTML Maker allows you to place background and text images on the web page. To do this, you can use an image file and click on the right tab

---

at the top of the page to paste the image. Although HTML Maker is simple to use, it isn't totally simple. You can read through a quick help tutorial for more in-depth information on some of the HTML Maker's more complex b7e8fdf5c8

HTML Maker is a simple-to-use application that includes preset commands to help you easily write HTML code. It primarily addresses users with less experience in HTML web design. After a brief and uneventful installation procedure, you are welcomed by a regular window with a minimalistic layout, representing HTML Maker's interface. The workspace is

---

similar to the one of a common word processing program, so you can start writing HTML code right away. HTML Maker allows you to insert predefined tags when it comes to HTML, head, title, style, body (background color and image), Bold, Italic, Underline, images, videos, tables and forms (action, method, input types, basic form example). In addition, you can draw a horizontal line across the page, as well as

---

edit font settings for the HTML code (while working). Evidently, you can improve the design of your HTML pages by introducing CSS code, but HTML Maker doesn't provide tag presets in this case. The simple application uses a low-to-moderate amount of CPU and system memory, so it shouldn't burden the computer's overall performance. It has a good response time and works well, without causing the OS to

---

hang, crash or pop up error dialogs. Unfortunately, HTML Maker has not been updated for a long time, and it doesn't let you preview results before saving the file to HTML.
