In a new interview with The Wall Street Journal, Bezos confirmed that he is the richest man in the world and that he will be the richest one hundred times over once his Amazon shares mature. The Amazon CEO made his announcement while boarding a private plane on which he was en route to his private island in the Bahamas. But he did not comment on his and MacKenzie Bezos's wealth, the size of his family or their relationship. The First Family: MacKenzie Bezos was spotted arriving at an event in

New York City with her husband, Amazon CEO Jeff Bezos, a day before in April Getty Images/John Angelillo Jeff Bezos has strong ties with his wife, and the couple shares not only wealth but also passions, he said. 'We are pretty different people in many ways,' Bezos said. 'We don't write off major works of art, the way we pass by others on the sidewalk. 'I'm enamored of fast cars. I'm a bit more low-fidelity in our feelings about art. And she's very sophisticated about that sort of thing.' Bezos made his wealth via his ownership of Amazon, the world's largest online retailer. He owns

Chronic kidney disease (CKD) is a frequent finding in patients with heart failure (HF). There are scarce data about the prevalence of CKD in Spain. The present study aimed to estimate the prevalence and comorbidity of CKD in Spanish patients with HF and to identify predictors of CKD in patients in this setting. Consecutive patients with HF were prospectively followed at seven Spanish hospitals and stratified according to presence of CKD and control subjects (2:1) who had HF and no comorbidities with a normal renal function (no-CKD group). Serum creatinine and estimated glomerular filtration rate (eGFR) were used to define CKD. A total of 2,944 patients with HF were included (mean age 81.2 ± 13.8 years; 62.2% female). CKD was present in 11.2% of the patients. Factors associated with CKD were age, female sex, and hypertension. In the no-CKD group, 50.3% had at least one comorbidity, while in the CKD group the percentage was 89.0%. The most common comorbidity in the CKD group was arterial hypertension (54.1%). CKD was associated with worse functional status, higher B-type natriuretic peptide levels and lower haemoglobin. There were no differences in mortality or length of hospital stay between both groups. CKD is a frequent finding in patients with HF and is associated with worse functional and haematological status. Hypertension is the most frequent comorbidity in both groups.Q: Is it possible to run a script when a user closes the browser in Google Analytics? I'm doing some basic
